📋 CAREER OBJECTIVE

BE CSE graduate with experience as a Tech Support Engineer, seeking to transition into Software Development. Strongly passionate about coding, problem-solving, and building impactful solutions. Committed to continuous learning and thriving in fast-paced, team-driven environments.

🎓 EDUCATION

BE Computer Science And Engineering 11/2020 – 05/2024
Vel Tech High Tech Dr.Rangarajan Dr.Sakunthala Engineering College
8.08 CGPA

🧠 SKILLS

Debugging & Troubleshooting: Root cause analysis, issue replication, and log investigation across application layers.
Programming & Scripting: Python, JavaScript, SQL.
Tools & Environments: Jira, Git, Postman, Linux command line.
Web Technologies: HTML, CSS, JavaScript, REST APIs

📁 PROJECTS

Automated Attendance Manager
Designed and developed a smart attendance management system using Python and OpenCV with LBPH-based facial recognition for high-accuracy student identification. Integrated data validation, storage, and retrieval using a structured database to ensure secure record management. Implemented modular architecture following Agile practices, including test scenarios for recognition and data workflows. Added CI/CD-friendly code structure using Git for version control and documented deployment steps for scalability in real environments.

BusMart
Developed a scalable full-stack OLX-style web app for buying and selling buses/spare parts using React.js, Node.js, and MySQL. Integrated JWT authentication, real-time chat, and advanced search filters. Focused on modular design, maintainability, and code reusability.

👛 EXPERIENCE

Technical Support Engineer - Kriyadocs 12/2024 – 12/2025

- Supported a large-scale publishing platform used by global clients, analyzing and resolving production blockers across XML, XSLT, LaTeX-conversion, and JavaScript-based transformation.
- Performed RCA on recurring issues in PDF generation workflows, identifying schema mismatches, XML structure breaks, and XSLT styling defects. Collaborated with developers and QA to reproduce bugs, define failure points, and streamline release fixes through Jira.
- Executed API-level validation for transformation and export workflows using **Postman** and **structured payload analysis**.
- Delivered temporary and permanent fixes, including **XML corrections**, **XSLT updates for PDF styling**, and **JavaScript/HTML transformation adjustments**, restoring SLA-critical workflows for production teams and customers.
- Built internal tooling to reduce manual effort and improve accuracy:
 - XML Modifier Tool:** Automated insertion of custom stage-tracking tags used across internal publishing workflows.
 - Semi-automated CSV Processing Tool:** Converted a backend-only script into a user-friendly frontend utility for non-technical teams, enabling sorting, validation, and AWS-upload readiness.
 - jQuery Automation Scripts:** Optimized repetitive HTML clean-up tasks by generating reusable scripts leveraging Kriyadocs' custom DOM-saving API.
- Improved debugging efficiency by analyzing logs, inspecting XML trees, and isolating breakpoints across the Node.js-based editorial tool and PDF-generation pipeline.
